

The parcel packing intelligence platform.

In complex parcel shipping operations, packaging analysis and cartonization can be challenging. Paccurate makes it easy.

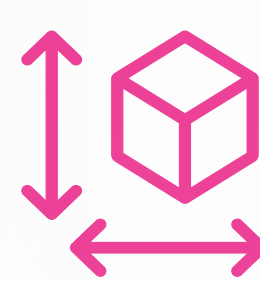

Real-time packing instructions.

The Paccurate API is the only cartonization technology that optimizes for costs directly. PacAPI will consider complex packing rules, material costs, and your carrier rate tables, to deliver 3D instructions of exactly how to pack orders.

PacAPI is your toolkit for packing, stacking, and loading efficiently. It's the fastest 3D cartonization engine of its kind, operating in several modes depending on your objective.

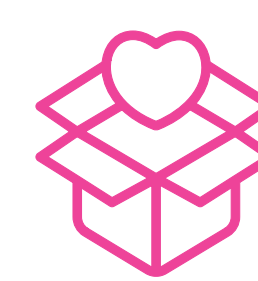

Find your ideal carton mix and more with a click.

Reduce transportation costs

Save up to 15% on shipping costs just from optimizing your carton mix.

Improve customer experience

Less waste for your customers to deal with.

Ship Sustainably

Reduce SCOPE-3 emissions from cardboard, filler, and shipping.

PacSimulate analyzes thousands of shipments to determine the best mix of carton sizes to use in your DCs and stores. It allows you to simulate different packaging scenarios to **identify the cost-optimal mix of cartons or mailers to keep in stock**. Running simulations before putting them into practice will help you understand the impact on your shipping costs, corrugate usage, and volume utilization.

Paccurate's platform is the easiest way to reduce fulfillment costs and meet ESG goals.
